## Message

Blind People are always oppressed in the society of developing & populous country like Bangladesh. We see, there is very little scope for the education of blind people in every district of our country. We are hopeful that the Government and some philanthropic organisations have come forward with this issue to resolve it satisfactorily out of their societal commitment. As a result, blind people are coming under the umbrella of education system gradually. In this backdrop, it is of much pleasure that "International Institute of Currency Technology (IICT)" has initiated "Awareness Program on Bangladeshi Bank Note For Blind". It is known that the Central Bank of the country, Bangladesh Bank always thinks of this blind population while any denomination of Note is put into circulation. Bank Notes contain some specific small dots so that the blinds can recognize those easily. We know that the blinds have strong sense as well. Fake note circulation can only be reduced if all the people are aware of the general features which Bangladesh Bank make public widely.

I wish this program a success.
